

CUSTOM INJECTION MOLDING

Specializing in Rubber Injection Molding
with Quick Turnaround

Vertical Injection,
Transfer and
Compression
Molding.

Available Compounds:

FKM	N6021
NBR	N6023
HNBR	XNBR
and More*.	

*Not a complete list. Contact MFP Seals for other materials not shown here.

Also featuring Rubber to Metal Bonding

Adding to our repertoire, the MFP Seals Molding Group has Vertical Rubber Injection Molding, in-house. Custom designed for highly efficient production of high volume components, our capabilities also include transfer and compression molding, when lower volumes are required. Vertical Injection molding also allows us to enhance the scope of our rubber to metal bonding production, with quicker turn-around, and more efficient mold designs.

Specializing in the production of customized grades of HNBR, FKM, XNBR, and other materials, we've designed them to meet or exceed your project specifications. While standard compounds are often a trade-off, settling on something that only partially matches your application requirements, we regularly work with our customers to formulate compounds that meet all of their specifications, without compromise.

Contact us for a quote on your next molding project. We're ready to inject some life into it!
